2026 Taiwan Helpers' Needs Survey -- automated analysis summary

- Responses analysed: **260** (221 organisation-affiliated incl. hybrid, 39 freelancers/independents)
- Women: 74%; Taipei + New Taipei: 58% of those reporting a county.
- Sample is self-selected (not probability-based): treat percentages as descriptive of respondents, not of all Taiwanese helpers.

Scale reliability (Cronbach's alpha)

scale	cronbach_alpha	n_complete
Job demands (9)	0.876	193
Job resources (9)	0.897	211
UWES-3 engagement (3)	0.931	260
CBI personal burnout (6)	0.92	260
CBI work burnout (7, w7 reversed)	0.883	260
ProQOL compassion satisfaction (3)	0.801	193
ProQOL burnout (3)	0.71	193
ProQOL secondary traumatic stress (3)	0.767	193

Burnout headline numbers

- Personal burnout: mean 53.1 (SD 21.9, n=260); 38% moderate (50-74), 21% high (>=75)
- Work-related burnout: mean 48.8 (SD 20.8, n=260); 35% moderate (50-74), 13% high (>=75)
- ≥ monthly thoughts of leaving (org respondents): 38%; actively searched for jobs: 57%.

Strongest correlations among composite indices (FDR q<.05)

Variable 1	Variable 2	rho	q	n
Personal burnout (0-100)	Work-related burnout (0-100)	0.87	3.61e-78	260
Years in helping work (ordinal)	Age (ordinal)	0.67	1.04e-33	258
Work engagement UWES-3 (1-7)	ProQOL compassion satisfaction	0.66	2.62e-24	193
Job-demand index (0-4)	Job-resource index (1-5)	-0.60	1.05e-21	219
Job-demand index (0-4)	Work-related burnout (0-100)	0.59	1.6e-20	219
Frequency considering leaving (0-4)	Expect to stay 1 yr (1-5)	-0.58	3.77e-20	221
Work-related burnout (0-100)	ProQOL burnout	0.57	3.8e-17	193

Variable 1	Variable 2	rho	q	n

Regression: Work-related burnout

Standardised OLS, n=189, R^2=0.535, adj. R^2=0.486, F p=3.7e-20. Significant predictors (p<.05):

Predictor	std. beta	95% CI	p	VIF
Difficulty w/ supervisor	0.28	[0.09, 0.47]	0.00414	3.4
Excess workload / uneven division	0.27	[0.12, 0.42]	0.000693	2.2
Unclear role definition	-0.24	[-0.40, -0.08]	0.00407	2.5
Free to voice concerns	-0.22	[-0.39, -0.05]	0.0127	2.8
Job demands exceed training	0.18	[0.03, 0.34]	0.0169	2.1

Regression: Work engagement

Standardised OLS, n=189, R^2=0.342, adj. R^2=0.272, F p=8.2e-09. Significant predictors (p<.05):

Predictor	std. beta	95% CI	p	VIF
Control over how I work	0.23	[0.06, 0.40]	0.00931	1.9
Clear expectations	0.16	[0.01, 0.31]	0.0353	1.5

Method notes

- Likert answers are coded ordinally; correlations are Spearman (rank-based); p-values corrected with Benjamini-Hochberg FDR.
- Burnout: 13 overwork items rescaled 0-100 (item 'energy for friends/family' reverse-scored); personal = items 1-6, work = items 7-13. Cut-offs 50/75 are conventional, editable at the top of the script.
- ProQOL-9: subscale means of three items each. UWES-3: mean of three items (1-7).
- Freelancer and organisational answer blocks are merged for shared scales; job-demand/resource, turnover and EAP items exist only for the organisational block.
- Correlation and regression show association, not causation; the sample is self-selected.
